MAIN FEATURES OF THE SMARTVISION

- 5 inch 600nit one touch captive display screen, the brightest display on market-does not wash out in daylight.
- HD reversing camera.
- The first to offer the 800MHz processor giving immediate use of all features.
- Bluetooth 4.0 with smart-phone music integration, with enough allocated space, allowing for 10,000 names in phonebook storage and hundreds of songs.
- Internal microphone and GPS antenna.
- Patented pending Front and Rear viewing continuous DVR recorder with built in camera and micro SD card (8GB card included).
- Three separate folders for saving driving footage.
- The G-sensor locks in any large vibration footage in a locked folder, preventing it from being erased. The second records normal driving while the third is for taking snapshot photos.
- Micro SD slot for DVR, up to (32GB)
- Dual speakers.
- Fully updatable software through SD card allowing for longevity in the market place.
- Optional parking sensors in a variety of colors.

SMARTVISION

Our newly introduced SmartVision answers the market demand for App-Tronics best-in-class quality and value at an exciting price point. We've retained our signature 5" 600nit display screen, the brightest on the market, and incorporated the SmartNav 5's reverse camera solution and Bluetooth 4.0. Perhaps most significantly, the SmartVision features our patent pending Dual Line DVR recording. This newly enhanced system is capable of recording both the front AND rear cameras.

Our premium software provides separate footage folders: "Locked Footage" contains videos preserved by the G-Sensor when it is triggered by incidents such as impacts or accidents, a second folder for "Normal Footage", and a third to capture still photos, all in HD quality. App-Tronics' goal of offering relevant technology in our products comes to life with the SmartVision's incredible DVR system that shows date and time as well as speed tags and motion detection. These advanced capabilities ensure a watchful eye on you and your family. We also offer parking sensors, which may be purchased and added on separately, which show location and distance to impact.
