

**SmartVision update for faster rear trigger while using DVR functions:**

**Read completely before attempting update.**

Load just the update on to a new Micro SD card 16GB or smaller.

Unplug SmartVision from main harness

Remove the DVR SD card that came with your SmartVision on the bottom left corner Flap.

Insert the new SD card with update, be careful not to push in to far (spring loaded)

Plug SmartVision back into main harness, be sure to line up the slits on each end

Once the Update tab appears asking you to press any button, Press the second button from left only

Allow the update to do its job completely, DO NOT turn off mirror

The SmartVision will power off and then back on

Once the update tab comes up again DO NOT press any button, unplug mirror again from main harness

Remove the new SD card

Put the original DVR SD card back in that came with your SmartVision

Plug SmartVision back into harness being careful to line up slits

Your SmartVision's rear camera will now engage faster on initial startup while using the DVR functions
